

# Jingzhang Intelligence Spine: Visible Public AI Innovation Belt

A conceptual visual package of scope, scenarios and evidence

AI conceptual scene or package-layer-derived figure; not an existing condition, statutory redline, approved rendering or engineering drawing.

Cover concept: heritage public spine, blue-green mobility and low-rise innovation edges.

# Overall spatial structure

One spine, three platforms, two wings and ten windows

AI conceptual scene or package-layer-derived figure; not an existing condition, statutory redline, approved rendering or engineering drawing.

## Jingzhang Intelligence Spine: overall structure

Provisional rough boundary is a concept-model constraint only; the board foregrounds spine, platforms, scenarios and evidence.

### One spine · three platforms · two wings · ten windows

Turning technical capacity into walkable, legible and feedback-ready everyday innovation interfaces.

- 1

Heritage public spine

Blue-green mobility, public rooms and cultural narrative.
- 2

Three innovation platforms

Testing/governance, university-linked translation, station-city exchange.
- 3

Two collaboration wings

Technology services and scenario application connect university, firms and community.
- 4

Ten scenario windows

Every service retains purpose, data minimization, human review and an exit boundary.

#### Spatial evidence layer

Provisional boundary → concept land use/public space/mobility/phasing → EPSG:4548 calculation → matched figures, HTML and narrative.  
Source: repository provisional boundary, package concept layers and taskbook. Not an official redline, control plan or engineering drawing.

Source: provisional boundary and package concept layers.

# Five spatial units

Concept functional organization and public spine

AI conceptual scene or package-layer-derived figure; not an existing condition, statutory redline, approved rendering or engineering drawing.

## Five spatial units: continuous transition from industry to daily life

Shared cuts create a gap-free, non-overlapping concept partition; they are not statutory land-use controls.

### Five spatial units

A public spine links research, green commons, open innovation, life and station-city exchange.

|   |                                   |                                                             |
|---|-----------------------------------|-------------------------------------------------------------|
| 1 | Research and prototyping          | Shared testing, standards workshops and public explanation. |
| 2 | Heritage blue-green commons       | Slow mobility, dwell, display and low-impact scenarios.     |
| 3 | University-linked open innovation | Release, copyright advice, talent and community learning.   |
| 4 | Community and talent life         | Everyday services, accessible in-person entry and support.  |
| 5 | Station-city exchange             | Arrival, pitching, consumption and global exchange.         |

Zones serve conceptual spatial relationships and metric calculation only; formal controls, ownership and surveys require professional reconstruction.

Shared cuts form a gap-free, non-overlapping concept partition.

# Zhongzhiyuan trusted-test garden

Governed testing, explanation and public green corridor

AI conceptual scene or package-layer-derived figure; not an existing condition, statutory redline, approved rendering or engineering drawing.

GPT concept: spatial expression of purpose statement, human review and reversible testing.

# Beijing AI Origin open-innovation street

University-linked collaboration, accessibility and everyday service

AI conceptual scene or package-layer-derived figure; not an existing condition, statutory redline, approved rendering or engineering drawing.

GPT concept: not a statement of campus boundary, existing condition or building-renewal decision.

# Dazhongsi station-city exchange room

Arrival, pitching, enterprise service and public dwell time

AI conceptual scene or package-layer-derived figure; not an existing condition, statutory redline, approved rendering or engineering drawing.

GPT concept: not an approved station, transport or engineering condition.

# Three key areas

## Differentiated platforms and one common public spine

AI conceptual scene or package-layer-derived figure; not an existing condition, statutory redline, approved rendering or engineering drawing.

## Three key areas: differentiated platforms and one common public spine

All three areas are repository provisional rough geometry; detail is a conceptual task for professional deepening only.

## Three platforms, differentiated roles

The public spine connects validation, knowledge translation and station-city exchange.

- 1

Zhongzhiyuan acceleration

Safety governance, full-stack testing, standards workshops and low-carbon experience.
- 2

Beijing AI Origin community

University-linked collaboration, open release, translation and talent support.
- 3

Dazhongsi industry cluster

Station-city arrival, intelligent commerce, pitching and international dialogue.

### Shared safeguards

Purpose statement · public/cleared data · human review · accessible entry · reversible tests · recalculation when official data arrives.

Key-area concepts cannot substitute for official boundaries, ownership, building renewal, road or engineering decisions.

Key-area boundaries are repository provisional rough geometry.

# Blue-green mobility and scenario windows

Accessible, visible, testable and feedback-ready

AI conceptual scene or package-layer-derived figure; not an existing condition, statutory redline, approved rendering or engineering drawing.

## Blue-green mobility and scenario windows: bringing innovation back to daily routes

Lines are conceptual slow/shared-street links only, not road redlines, rail alignments or engineering design.

### Four spatial conditions for public AI

Technology should not remain inside closed campuses; it should be legible and queryable on governed public routes.

- 1

Continuous access

One heritage spine and three transverse stitches organize walking, cycling and accessibility.
- 2

Visible without over-collection

Windows state service purpose, minimize data and retain non-digital routes.
- 3

Testable and reversible

Three industry tests use limited scope, audit and human review.
- 4

Dwell and feedback

Public rooms support display, consultation, complaint and community feedback.

The mobility network, nodes and scenario services require professional deepening when road, rail, utility, accessibility and safety data are available.

Mobility lines are conceptual slow/shared-street links.

# Recomputable metrics and evidence chain

One spatial model drives figures, HTML and metrics

AI conceptual scene or package-layer-derived figure; not an existing condition, statutory redline, approved rendering or engineering drawing.

## Recomputable concept metrics and evidence boundaries

All values are recalculated from package geometry in EPSG:4548; the provisional rough boundary makes them low-confidence concept-model outputs only.

Statutory FAR, height and control conditions remain pending.
